VOICE BRIDGE

The **VoiceBridge** helps companies to keep communication at cash registers and information desks clear and understandable even with protective measures, safety distance, hygienic walls and protective masks.

Retailers stand out from the competition in terms of advice, service and security.

Result: more security, better communication

Digital and contactless intercom solution.

The VoiceBridge is a new, hygienic, safe and flexible solution especially for acrylic glass walls and cabins in schools, pharmacies, medical practices, stores and supermarkets as well as for visitor booths in nursing homes.

In order to make communication as easy to understand as possible in any environment despite protective masks, safety distance and protective walls, we have equipped the VoiceBridge with the latest technology.

Protection

Reduced risk of infection through droplet infection. Neither physical approach nor louder speaking is necessary.

Frustration-free

The new communication situation is no longer exhausting, less frustration on both sides.

Speech clarity

Enables consultation and communication under protective measures.

Clever

Employees and customers communicate effortlessly, clearly and securely - even with mouth protection and in the case of strong background noise.
